Arpita Sannamat	20245103026	Intake 53, Sec 05

Submitted To: Nahida Akter Tanjila, Lecturer, Dept. of CSE | **Date:** October 4, 2026

1. Introduction & Scope

ZeroBuild Studio is a no-code, multi-tenant SaaS e-commerce website builder platform for small and medium entrepreneurs in Bangladesh. Every store owner receives a free subdomain on registration with custom domain support. The platform provides Store Builder, Business Management, Payments & Shipping, and Analytics.

2. Selected Functional Requirements (FR Summary)

Req No	Description of Functional Requirement
FR1	Registration with email/phone and OTP account verification.
FR2	Secure authentication and role-based feature authorization.
FR5-FR6	Guided store setup wizard, automatic subdomain and custom domain mapping.
FR7-FR8	Pre-built themes with drag-and-drop page editor and PWA storefront.
FR9-FR11	Product CRUD with variations, CSV/Excel bulk import, and automated low-stock alerts.
FR12-FR14	Product browse/cart/checkout with SMS/OTP customer verification.
FR16	One-click fraudulent customer check based on call/report history.
FR18-FR19	Payment gateway integration (bKash, Nagad, Rocket, SSLCommerz, QR codes).
FR20-FR21	One-click courier parcel booking (Pathao, Steadfast, REDX) and automated tracking.
FR22	Point of Sale (POS) module synchronizing physical store sales with online stock.
FR23-FR24	Real-time sales dashboard, order breakdowns, and daily/weekly comparison reports.
FR25-FR26	AI-assisted product descriptions, Facebook Pixel, and bulk SMS marketing.

3. Non-Functional Requirements (NFR Summary)

Req No	Description of Non-Functional Requirement
NFR1-NFR2	Response time under 2s; storefront mobile load time within 3 seconds.
NFR3-NFR4	Target 99.9% uptime with load balancing; supports concurrent multi-tenant loads.
NFR5-NFR6	SSL encryption, hashed passwords, and complete tenant data isolation.
NFR7-NFR9	Automated regular backups and atomic transactions for inventory consistency.
NFR11-NFR12	Bangla & English localization with BDT currency; responsive across all devices.

4. Technical Stack & Academic Conclusion

Built with Python backend routing, dynamic SSR renderer, and modular database connector. Version control and Agile task tracking are managed on GitHub and Jira.
